

## STATEMENT OF PURPOSE

My name is XYZ. I am an individual with a vision to bring change in the lives of the people in the society.

Every year, numerous people succumb to several diseases whose cure has not been found by modern medical sciences. My aim is to contribute towards the eradication of such diseases by developing modern medicines.

I completed my academics with Bachelor of Science in Chemistry in 2013. I also completed MSc in Organic and Pharmaceutical Chemistry in 2015 from ABC University. I have worked at ABC International Corporation from March 2018 till February 2020 as a Research Assistant. I also worked as a Research Assistant at Institute of Biological Chemistry in ABC from March 2016 till February 2018. Now, I wish to study in depth about the area of chemistry.

I have opted for **MSc Analytical Chemistry** which is relevant to my previous work experience and education and will help me to perform well in my professional life. It will enhance my knowledge of analytical skill and will help me to understand requirements of development of medicines which will include all aspects that can affect public health. I already have knowledge related to chemistry sector and above that learning the new aspects which are important for creating the medicines will help me for better achievement in my future. It will upgrade my knowledge of analysis and evaluation in practical implications. Also, this course will open the doors of opportunities to work with multinational health groups as a chemical scientist. That is why I am opting this course as my further education to create my career profile stronger.

ABC University is one the most diverse colleges in the UK. It has great resources and a well settled area that will give a complete exposure and international environment in which I can learn my subjects easily. The group of faculties are having a variety of honour winning universal specialists. Among the staff are universally recognized authors, and industry pioneers. By studying with ABC University, they will give something more than a degree. Since this University gives world-class modern facilities, I will get the genuine information, experience, and ability that businesses are extremely searching for and with the support of knowledge provided by the well-trained faculties my knowledge in my area of chemistry will expand and will help to learn every aspects of my syllabus.

I have numerous reasons to choose to study in UK. Firstly, it is widely known for its quality education. It provides support through which I can improve my learning strategies and develop more interest to learn my subjects properly and effectively. Secondly, UK has a shorter duration of courses which help to reduce tuition fees and accommodation costs. Thirdly, the education system in the UK promotes close student teacher interaction, which I think is really essential. Not only that, hundreds of languages are spoken across the UK but the one I will be most immersed in is English. I want to understand the study methods from the trained faculties, who are pioneers in their field, which will allow me to gain further knowledge to increase my level of thinking.

On successful completion of my masters I intend to return my country of origin India and will look for my relevant job as per my knowledge. Masters from university will help me to work as a scientist, so seeking

degree from university will be a step ahead for me. Also, it will give me a chance to implement my knowledge and skills in practical for the growth of organization which will hire me and also will contribute in nations development which will directly help me to improve my personal growth as well. It will give me chance to work for multinational health groups like public health foundation of India, foundation for research in health systems and more which will help me to build my career.
